# HOSPITAL MANAGEMENT SYSTEM

ABSTRACT

The Hospital Management System (HMS) is a comprehensive software solution designed to streamline the administrative and operational processes of a multi-specialty hospital. Developed using C# with Microsoft Visual Studio 2010 and integrated with Microsoft Office Access 2007 for the database, the HMS offers a user-friendly interface for managing various aspects of hospital operations, including doctor, nurse, patient, and staff details. The system empowers administrators to efficiently handle tasks such as adding, updating, deleting, and retrieving information, thereby enhancing productivity and improving patient care.
